

MaternalCare+

The Standard in Maternal Care

A secure, closed-loop digital platform connecting hospitals, midwives, mothers, and partners — replacing paper MCH books with real-time antenatal care, nationwide visibility, and privacy-first access.

The problem

Maternal outcomes depend on continuity of care — yet records, communication, and family engagement remain fragmented.

287K+

GLOBAL MATERNAL DEATHS / YEAR (WHO)

Most are preventable with timely antenatal visits, tracked vitals, and coordinated handoffs between facilities.

For health systems

- Paper MCH books are lost, damaged, or left at home
- No single view when patients move between hospitals
- Manual onboarding and poor visibility into high-risk pregnancies
- Limited tools for partner education and engagement

For mothers & families

- Little visibility between clinic visits
- Lab results and advice arrive late or not at all
- Partners excluded from structured, secure updates
- No trusted digital channel to reach care teams

For clinicians

- Duplicate data entry across registers
- No real-time alerts on clinical updates
- Hard to export data for reporting and audits
- Chat and coordination happen on personal phones

Our solution

One platform. Four roles. Hospital-controlled access. Mothers own their journey; partners join with consent.

Hospitals

Onboard patients, manage digital MCH records, labs, vitals, appointments, national registry search, and export — with real-time notifications.

Mothers

Mobile-first dashboard: gestational progress, clinic recommendations, care history across facilities, digital MCH book, and secure messaging.

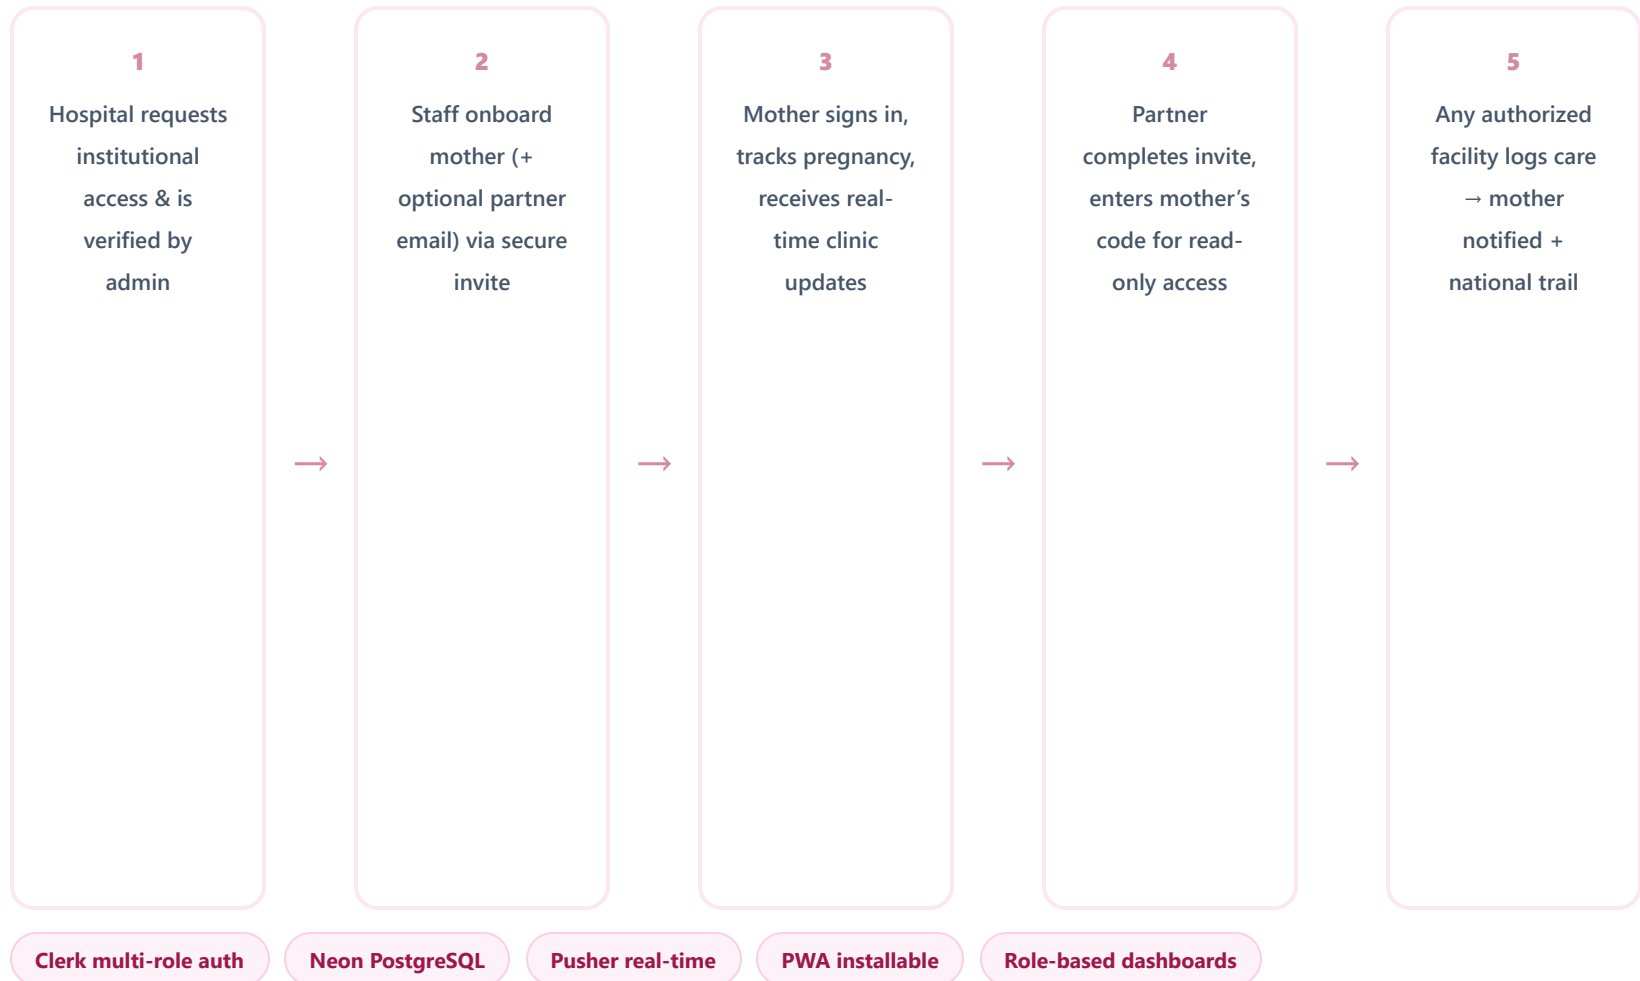

Partners

Separate accounts via hospital invite + mother-issued access code — read-only view of progress, labs, and MCH book.

Closed-loop, invite-only care

Patients cannot self-register without a hospital. Providers cannot access without institutional approval.

How it works

Hospital & clinical portal

- **Patient onboarding** — invite mother & partner by email; pregnancy record created instantly
- **Digital MCH book** — allergies, meds, obstetric history, immunizations, growth charts
- **Clinical updates** — vitals, labs/scans, standing advice surfaced to patient “Recommended for You”
- **Real-time notifications** — mothers alerted when records change (Pusher)
- **National registry search** — find patients by name, phone, email, or ID across hospitals
- **Cross-facility care history** — visiting hospitals log encounters; home facility + mother see full trail
- **Export data** — CSV export for reporting and audits
- **Staff & chat** — add staff, secure in-app messaging with patients

Provider value

Reduce leakage — mothers stay in your digital ecosystem between visits.

Risk visibility — gestational age, labs, and visit advice in one place.

Network effects — facilities that join the registry improve continuity for every patient.

Invite-only

Audit-friendly

tel: hospital contact

Mother & partner experience

Pregnant woman app

- Gestational progress, EDD, vitals charts
- Upcoming visits & clinic-recorded recommendations
- Care history when treated at other network hospitals
- Digital MCH book (read/write for mother)
- Nearest hospitals & direct call to registered facility
- Install as PWA on phone or desktop
- Generate partner access code after hospital registers partner

Partner / father app

- Own login — never shared with mother's account
- Hospital email invite → registration → mother's security code
- Read-only dashboard: progress, labs, clinic advice
- Read-only MCH book view
- Supports family engagement without exposing edit rights

Privacy by design: partner access requires hospital registration + active mother authorization.

National MCH continuity

A visiting hospital can care for a registered patient while the home facility and mother retain full visibility.

Registry search

Authorized staff search by patient name, phone, email, or national ID — not internal system IDs.

View care trail: which facilities treated the patient, when, and summary of actions.

Automatic care logging

Clinical actions (vitals, labs, advice, profile updates) create encounter records and notify the mother in real time.

Mother dashboard shows facility summary + chronological history panel.

Built for multi-facility health systems

Ideal for countries scaling digital MCH registers across public and private providers.

Technology & security

Layer	Stack	Why it matters
Application	Next.js 16, React, TypeScript	Fast, SEO-friendly marketing + secure app routes
Auth	Clerk (roles: mother, father, midwife, hospital, admin)	Enterprise SSO-ready; metadata-driven routing
Data	Neon PostgreSQL + Drizzle ORM	Relational integrity for clinical records
Realtime	Pusher	Instant notifications on record updates
Deploy	Vercel + HTTPS	Global edge, automatic SSL
Mobile	PWA (installable)	No app store required; works on iOS & Android

- Invite-only registration
- Role-based access control
- Partner consent code
- Webhook-provisioned users
- Export & audit logs (roadmap)

Market opportunity

\$12B+

DIGITAL WOMEN'S HEALTH
(GLOBAL, GROWING)

Antenatal digitization is a policy priority across Africa and emerging markets.

1.2M+

BIRTHS / YEAR (GHANA EXAMPLE)

Each pregnancy = 8–12+ touchpoints
— ideal for a subscription-per-facility model.

100%

PAPER MCH BOOK REPLACEMENT

Governments and NGOs fund MCH digitization — clear budget line for buyers.

Initial beachhead

- Private hospitals & CHPS-linked facilities seeking premium patient experience
- Regional chains wanting standardized antenatal workflows
- Ministry / NGO pilots for national digital MCH register

Business model

B2B — Hospitals (primary)

- **SaaS subscription** per facility / per bed / per active pregnancy
- **Onboarding fee** for training, data migration, branding
- **Network tier** for national registry & cross-facility modules
- **Enterprise** — SLA, custom integrations (DHIS2, OpenMRS)

Future revenue

- Analytics & population health dashboards for ministries
- SMS / WhatsApp reminder packs (Twilio)
- Insurer & employer wellness partnerships
- White-label for NGO programs

Mothers & partners: **free** (paid by provider). Aligns incentives with hospitals as buyer.

Traction & product status

- **MVP live** — full role-based dashboards deployed on modern stack
- **Hospital onboarding** — patient + partner invite flow, digital MCH book
- **Real-time clinical notifications** to mothers
- **National registry search** + cross-hospital care history
- **Partner security model** — hospital invite + mother access code
- **PWA** — install on mobile & desktop without app stores
- **Institutional access requests** via public website

Near-term roadmap

- SMS appointment reminders
- DHIS2 / national EMR integrations
- Offline-first MCH book sync
- Midwife field app optimizations
- Advanced analytics for MOH reporting

Why we win

	Paper MCH book	Generic EMR	Consumer pregnancy apps	MaternalCare Plus
Hospital-controlled onboarding	—	Partial	X	✓
Digital MCH book (national format)	X	Partial	X	✓
Cross-facility care trail	X	Silos	X	✓
Partner access w/ consent	X	X	Partial	✓
Real-time mother notifications	X	Rare	N/A	✓
Installable PWA (low data)	—	Desktop-heavy	App store only	✓

Team

Founding team combining healthcare operations, software engineering, and maternal health program delivery.

The ask

Seeking: Seed / pilot funding and anchor hospital partners to scale onboarding across 3–5 facilities in Year 1.

- Use of funds: engineering, clinical QA, hospital success, compliance
- 12-month goal: 2,000+ active pregnancies on platform
- MOH / NGO letter of support for registry pilot

Pilot package

90-day facility pilot: onboarding, staff training, digital MCH book rollout, success metrics (visit adherence, record completeness, patient NPS).
